

GIVING TOOTH ENAMEL THE PROTECTION IT DESERVES.

ClearVu cosmetic braces provide the ultimate combination of beauty and performance, resulting in a healthy bite and a smile you can be proud of.

The ClearVu difference:

- ✓ Designed to protect your tooth enamel², and for ease of removal at the end of treatment
- ✓ Maximum comfort due to small size and ultra-smooth surface
- ✓ Robust ceramic material reduces the risk of breakage, assuring your treatment stays right on track
- ✓ Exclusive *Personalized Color-Matching Technology* allows the braces to blend in with your natural tooth color
- ✓ Aesthetic tooth-colored wires are available to perfectly complement your new braces
- ✓ Perfect for bleached tooth shades

CONFIDENCE YOU CAN SEE.

BRACES YOU CAN'T.

CLEARVU®

BRACES THAT MATCH YOUR SMILE.

Imagine wearing braces that blend with the shade of your teeth so well that people might not even notice you're wearing them.

ClearVu® cosmetic braces feature *Personalized Color-Matching Technology*® that allows them to match virtually any tooth shade by blending in with the surrounding enamel.

After you've made the decision to improve your smile, there is important information to consider when choosing the treatment method that works best for you. If you are considering aligners or "clear" braces, you may find this comparison helpful.*

AESTHETIC BRACES

- New technology has resulted in "clear" braces that are barely noticeable and aren't obvious in photos¹
- Always active, they constantly and gently move your teeth toward the desired position
- No need to worry about taking them in and out throughout the day since they are bonded directly to your teeth
- Treatment with bonded braces is more predictable³—and may treat complex cases in less time than aligners⁴
- Braces are more effective in improving your occlusion⁵ and create a healthy "bite" as a matter of the course of treatment
- Orthodontic treatment with braces is always directed by a doctor who you see in person; any problems can be identified and quickly corrected, making sure you stay on track to achieve a great smile

There's no need to hide your braces! An investment in a healthy smile is always in style—you can even have fun by adding different color ligatures to your braces at each dental appointment.

ALIGNERS

- Are barely noticeable and can be removed for special occasions or photos, but will require quite a bit of "maintenance" on your part
- Work intermittently—the force on your teeth is strongest at the beginning of each tray change, which can be uncomfortable
- Can be removed (and must be removed even to snack or drink anything but water), but typically must be worn 22-23 hours per day or more
- You may still have attachments bonded directly to your teeth—and may even need to use elastics as you would with braces⁶
- Aligners have limitations with correcting your occlusion or "bite"^{3,7} and depending on your case or tooth movement desired, you may require an additional set of trays or other treatment
- "At home" aligner treatment has many limitations and should be carefully considered only after discussing with your dentist or orthodontist
